Doosan Infracore America is the fastest emerging forklift and lift truck corporation in the North American market, thanks to its outstanding level of product performance and their persistently high level of buyer support and service given to all Doosan Infracore Lift Truck clients. The U.S. forklift division stationed in Cleveland has a professional team experienced in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

At first the domestic forklift marketplace in Korea was an open import enterprise. Korea Machinery Co. Ltd. started in 1960, to import fully assembled forklifts as part of a home-based machinery expansion project. Product sales of these products were originally targeted to state-run corporations, large scale organizations, and the armed forces. This eventually led to a merger with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun business operations throughout Korea to service and sell this heavy equipment. By 1978, a lift truck manufacturing plant was successfully completed. Continuous technical education grew to become the new focus for improving quality and product development.

Daewoo began the first home-based lift truck business in 1967, and rapidly acquired a whopping 90% share in the Korean Materials Handling market. By the 1980's, Daewoo's progressive technological advancements combined with sales success placed them in a position of significant expansion of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint venture project to respond to competitive pressures in the US materials handling market. This endeavor drastically expanded Daewoo's forklift sales. Construction was completed in 1984 to facilitate a contemporary plant which helped establish the company for the manufacture of high end added-value products suitable for export. In 1993, the corporation had a international sales network and started exporting designs they had developed through in-house expertise, as an independent brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing growth opportunities into international marketplaces.
